

Upgrade readiness without the surprises.

Horizon runs the full readiness picture against the **live state** of your ArcGIS Enterprise deployment — every server, every content item, every Esri requirement — and turns it into an **evidence-backed upgrade roadmap**. Delivered as a managed service by ROK Cloud Engineering.

SCAN

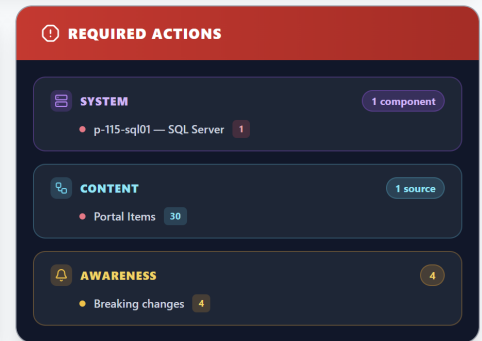

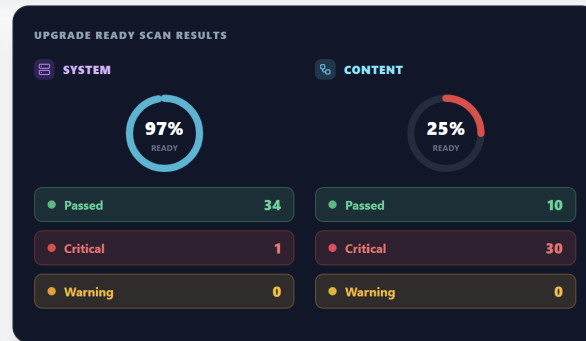

Live inventory of Portal, Server, Data Store, Web Adaptors and every federated Esri product — joined with real per-machine hardware.

SCORE

Each component and content item graded against Esri's published requirements, retirements and breaking changes.

PLAN

A phased upgrade roadmap you can use to prepare for the next version of Enterprise — ensuring you are ready on the release date.

Live scan output — migration score, system & content readiness, and required actions for a real 11.5 environment.

WHAT YOU GET

Live environment scan

Portal, ArcGIS Server, Data Store and Web Adaptor topology — plus Notebook, Workflow Manager, GeoEvent, Image Server and other federated products, auto-discovered.

Content compatibility, per owner

Every app, widget, dashboard and workbook matched to its target-version status and its owner — including per-widget WAB → Experience Builder analysis.

Multi-hop upgrade paths

Sources on 10.7+ get the hop-by-hop sequence to the latest version — not a "go direct" recommendation that can't physically work.

Hardware-grounded compliance

Per-machine CPU / RAM / OS / disk pulled from RMM and graded against Esri's role-aware minimums — cloud instance types resolve to real vCPUs, not guesses.

Version-aware insights

Breaking changes, deprecations, patch and security advisories scoped to your exact source → target pair — every finding linked to the Esri doc it came from.

Steering-committee-ready exports

Dashboard PDF with your real environment, content Excel, and a five-phase roadmap with per-step owner attribution and reference docs.

BE CONFIDENT IN YOUR NEXT UPGRADE

Built by ROK, Horizon is more than just another SaaS. Your dedicated ROK Client Success Manager collaborates with your team to ensure your environment is fully ready. There are no licenses to buy and no software to run—you get full access to the complete experience including the walkthrough, exports, and the full roadmap.
